PROFILE

Senior AI Engineer with 11+ years building production Node.js, React, and AngularJS systems across enterprise SaaS, geospatial intelligence, and rapid client prototyping — now operating as an AI-native product engineer shipping LLM-powered features, autonomous agents, and multi-step agentic workflows on AWS. Currently **Senior AI Engineer at Affle**, where a 360° review platform I built is used by **600+ employees across global offices**; part of the team that built **Moose (acquired by Kaluza, 2025)**. Daily driver of Claude Code, Cursor, GitHub Copilot, and Augment Code; I treat AI agents as real engineering teammates with explicit responsibilities, context, and guardrails. Strongest where unclear product requirements meet hard system constraints — owns 0 → 1 prototypes through to hardened production.

CORE SKILLS

AI-Native Engineering: LLM application development, RAG pipelines, agentic workflows, multi-agent orchestration, tool/function calling, structured output, evals, prompt engineering, guardrails, context engineering, AI-assisted refactors

AI Tooling (daily driver): Claude Code, Cursor, GitHub Copilot, Augment Code, MCP servers, AI-assisted code review, autonomous coding agents, AGENTS.md / CLAUDE.md context engineering

LLM Stack: OpenAI GPT-4o, Anthropic Claude (Sonnet / Opus), Llama, Hugging Face; LangChain, LangGraph, LlamaIndex, CrewAI; Pinecone, ChromaDB, FAISS, pgvector

Languages: TypeScript, JavaScript (ES6+), Node.js, Python (LLM tooling), C# (legacy enterprise)

Backend: Node.js, Express, AWS Lambda / Serverless Framework, REST, WebSockets, SSE, JWT, OAuth 2.0

Frontend: React 18, Redux / Zustand, AngularJS, Tailwind, Material UI, responsive + real-time UIs

Data & Cloud: DynamoDB, MongoDB, SQL Server, MySQL; AWS (EC2, Lambda, API Gateway, S3, CloudFront), Docker, CI/CD, Git, JIRA

Methods: Rapid prototyping, MVP shipping, system architecture, technical leadership, code review, spec-driven workflows with AI agents

EXPERIENCE

Affle — Senior AI Engineer

Jun 2025 – Present

Full-time from Jun 2026; contract via DashAnalysis Jun 2025 – Jun 2026. Global adtech & consumer-intelligence company.

- Own and operate a 360° review platform in production — **now used by 600+ employees across Affle's global offices** — turning peer, manager, and self feedback into structured, LLM-synthesised review reports.
- Scaled the platform from initial rollout to a global user base with a focus on reliability, consistent structured outputs, evals, and report quality.
- Build and maintain production LLM features on Node.js + AWS with cost, latency, and observability controls; converted from contract to a full-time Senior AI Engineer role in Jun 2026.

DashAnalysis Pty Ltd — Senior Full-Stack & AI Engineer

Aug 2020 – Jun 2026

Lead engineer for AI capabilities on a multi-tenant analytics platform; co-designed architecture and owned production delivery of all AI features.

- Architected enterprise RAG pipelines (LangChain + LlamaIndex on Node.js / Python services) over technical documentation — ~40% retrieval-efficiency gain; multi-day analyst lookups replaced with sub-minute answers.
- Designed and runs autonomous AI agents using LangGraph and CrewAI to automate analytics, reporting, and DynamoDB orchestration workflows.
- Integrated Claude and GPT-4o into Node.js + AWS Serverless backends with retry / guardrail layers, structured outputs, and prompt caching — reduced hallucination incidents and stabilised production cost.
- Productionised Claude Code, Cursor, and Augment Code as the default workflow — shared CLAUDE.md / AGENTS.md context, custom slash commands, MCP-style tool integrations; ~30% faster feature cycle.
- Led React 18 + TypeScript front-end re-architecture replacing legacy AngularJS modules; built real-time dashboards over WebSocket streams.

- Co-built **Moose** (beige.tech/solutions/moose) — enterprise product platform on AngularJS + AWS serverless; owned full-stack delivery and infrastructure-as-code rollout. **Acquired by Kaluza in 2025.**
- Designed and built the **360° review platform (qrank.it)** on AngularJS + Node.js + AWS with LLM-generated review reports — later deployed at scale across Affle (600+ employees).
- Delivered bespoke multi-step agentic workflows (LangGraph + Node.js) for SMB / enterprise clients — replaced manual SOP-driven back-office tasks with bounded autonomous agents.

Blaque Fracture Technologies Pty Ltd — Senior Full-Stack Developer

Jul 2019 – Jul 2020

- Translated business requirements into MERN-stack applications (MongoDB, Express, React, Node.js) for B2B clients; owned features end-to-end from spec to production.
- Designed responsive React + Redux interfaces with reusable component patterns; standardised form validation, error handling, and loading states.
- Built REST APIs with JWT auth, role-based access control, and audit logging; wrote MongoDB aggregation pipelines and indexes for read-heavy workloads.
- Integrated third-party services (payment, email, file storage) behind clean adapter layers; participated in technical-design reviews and code reviews.

Archimedes — Software Developer

Nov 2018 – Feb 2019

- Built React frontends bridged to Node.js + MongoDB backend services; converted design specs into production-ready, accessible components.
- Implemented OAuth 2.0 authentication and authorization with secure session handling, refresh-token rotation, and protected routes.
- Wrote modular Express middleware for request validation, rate limiting, and structured error responses.

Blockfreight, Inc. — Software Developer

Aug 2018 – Oct 2018

- Engineered single-page applications using React and Redux integrated with RESTful Node.js / Express endpoints backed by MongoDB.
- Built domain list/detail flows, search, and filtering with focus on perceived performance — skeleton loaders, optimistic updates, paginated lists.
- Authored API services with consistent input validation, error contracts, and logging.

Contenterra Software Pvt. Ltd. — Software Developer

Feb 2015 – Jun 2018

- Delivered .NET enterprise web applications (ASP.NET MVC, WCF, Entity Framework, C#, HTML5, JavaScript) across the full SDLC for multiple client engagements.
- Designed data-access layers and optimised SQL Server queries with LINQ, indexed views, and stored procedures to meet enterprise SLA requirements.
- Implemented authentication / authorization (Forms, Windows, claims-based) and integrated with third-party SOAP and REST services.
- Reviewed pull requests, ramped junior team members on the codebase, and maintained engineering standards across release cycles.

FOUNDER — CONTENT FACTORY (INDEPENDENT AI PRODUCT)

Founder, builder & operator · 2,200+ YouTube subscribers · 600k+ views in 4 months

- End-to-end AI content factory I founded and run solo, on Next.js 16 + TypeScript — automates script → TTS → video → publish for a Telugu astrology YouTube channel; runs unattended, fully AI-generated.
- Claude Agent SDK generates persona-driven scripts; Edge TTS + a custom Parler-TTS server (Hugging Face open-source) produces multi-language audio (6 languages); Remotion renders videos with word-level animated subtitles; auto-publishes to YouTube + Instagram via OAuth.

EDUCATION

Master of Information Technology (Data Analytics) — Deakin University, Australia · 2018–2020 · WAM 81.25

B.Tech, Computer Science Engineering — CVR College of Engineering · 2011–2015
